Barak Ben Acon

barakbenacon@gmail.com | 0525685974 | LinkedIn | GitHub

I am an analytical **M.Sc. Computer Engineer** & **MBA (Honors)** graduate, merging academic excellence with practical industry experience. Possesses a deep understanding of the **hardware-software interface** from comprehensive engineering studies, alongside **critical thinking** honed through M.Sc. research. My roles at **ADTRAN** and as a **C++ TA** demonstrated strong collaboration skills and the ability to deliver robust **Python/Automation** solutions. Proficient in **Java, C++, and AWS**. I am eager to take on a challenging **Backend or AI** role that demands deep algorithmic expertise and a system-wide perspective

Experience

Teaching Assistant – Object-Oriented Programming (C++)
Bar-Ilan University *2025*

- Taught core object-oriented design and C++ fundamentals, translating theoretical concepts into production-grade programming practices.
- Guided students in debugging complex issues, improving code architecture, and managing memory safely and efficiently.

Software Student Engineer

ADTRAN *2022 – 2023*

- Built automation and validation pipelines for distributed network systems using Python, Bash, Jenkins, and GitLab, supporting continuous testing and deployment at scale.
- Operated, configured, and debugged Linux-based network devices, integrating them into backend-controlled orchestration and monitoring systems.
- Diagnosed and resolved cross-layer issues spanning hardware, operating systems, and backend services, improving system reliability and deployment stability.

Education

Bar-Ilan University

- ***M.Sc. in Computer Engineering (Thesis)| Advisor: Dr. Moti Medina*** *2023-March 2026*
  GPA: 91.3 | Full-time research scholarship
  Thesis: *Resilient and Hazard-Free Circuits*: research in fault-tolerant and reliable hardware systems.
- ***MBA (Honors Program)*** *2024–2025*
  Selective track for high-achieving students, leadership, strategy, and organizational excellence.
- ***B.Sc. in Computer Engineering*** *2020–2023*
  GPA: 82.9
- psychometric score: **711**

Selected Projects

- **Scrabble Platform** (Java, MongoDB, React)
  Built a modular, object-oriented game backend with algorithmic game logic.
- **Sokoban Solver** (Python, NuXmv)
  Implemented and formally verified a logic-based planning system.
- **ClassifyLineages** (Python, ML)
  Developed an ML model for biological lineage classification.

Languages: Python, Java, C++, Go, Verilog | Tools: CI/CD(Jenkins, GitLab) PyTorch, Linux, AWS.
